Practice School II Report (Mid semester),2026

Design and Automation of Retention Marketing Campaigns

PREPARED BY

Anwesha Mondal

2022BTech016

EXTERNAL SUPERVISOR

Sapna Pamnani

FACULTY SUPERVISOR

Asst. Prof. Ankush Soni

Department of Computer Science Engineering

Institute of Engineering and Technology

JK Lakshmipat University, Jaipur

Rajasthan – 302026

March,2026

CERTIFICATE

This is to certify that the Internship Report titled "Design and Deployment of Automated Retention Campaigns" is a Bonafide record of the work carried out by Anwesha Mondal, a student of B.Tech - Computer Science and Engineering (VIII Semester), as part of the course Practice School - II (PS-1102) at Institute of Engineering and Technology, JK Lakshmipat University, Jaipur.

The internship was undertaken at Toposel Digital Marketing Pvt. Ltd. in partial fulfillment of the academic requirements of Practice School – II, which aims to provide industry exposure and practical implementation of classroom knowledge in real-world applications.

The work presented in this report reflects the activities performed during the mid-term period of PS-2 and has been carried out under the supervision of the industry mentor and internal faculty supervisor.

Internal Faculty Supervisor: Asst. Prof. Ankush Soni
Date: 06-03-2026

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to JK Lakshmipat University, Jaipur, and the Institute of Engineering and Technology (IET) for providing me the opportunity to undertake Practice School – II (PS-1102) as part of the B.Tech curriculum.

Practice School – II is designed to bridge the gap between academic learning and industry application by enabling students to work on live projects in real organizational environments

I am thankful to Toposel Digital Marketing Pvt. Ltd. for offering me the opportunity to gain hands-on experience in automation-driven digital campaign systems.

I extend my sincere appreciation to my industry mentor for their continuous guidance, technical insights, and constructive feedback throughout the internship period. Their support helped me understand real-world workflow automation, structured documentation, and system-based campaign deployment.

I am also grateful to my internal faculty supervisor and the Department of Computer Science and Engineering for their guidance and academic support in completing the mid-term requirements of PS-2 successfully.

Finally, I thank my family and peers for their encouragement and motivation throughout this learning experience.

ABSTRACT

Practice School – II (PS-1102) is a credit-based structured course offered in the final semester to provide students with exposure to real-world industry applications and practical implementation of theoretical knowledge.

This report presents the mid-term work carried out during the internship at Toposel Digital Marketing Pvt. Ltd.

The internship focused on the design and deployment of automated retention marketing campaigns using multi-channel communication systems. The work involved creative campaign design, HTML email template structuring, user segmentation implementation, trigger-based workflow configuration, and campaign deployment through automation platforms such as Interakt, Customer.io, Mailchimp, and Mailjet.

Additionally, structured tracking mechanisms using UTM parameters and Excel-based analytics were implemented to monitor performance and support data-driven optimization. The internship provided exposure to API-based communication systems, conditional automation logic, and real-time deployment validation.

Through hands-on participation in live campaign execution, this Practice School - II experience strengthened technical competencies in workflow automation, system integration, structured documentation, and data analytics. The internship successfully bridged academic learning in Computer Science with practical industry implementation in marketing technology systems.

Chapter 1: ABOUT THE ORGANIZATION

Toposel Digital Marketing Pvt. Ltd. is a digital marketing and performance-driven advertising company that specializes in helping brands grow their online presence and revenue through strategic digital solutions [1].
The company works with emerging brands and businesses across industries such as fitness, wellness, e-commerce, and lifestyle. It focuses on data-driven marketing, creative optimization, and customer retention strategies. Toposel operates with a performance-oriented approach, leveraging digital platforms like social media, search engines, email marketing, and WhatsApp marketing to deliver measurable growth.

1.1 Goals & Mission

Mission
To empower brands with result-oriented digital marketing strategies that increase visibility, engagement, and conversions while maintaining customer trust and brand authenticity.
Vision
To become a leading performance marketing agency known for innovation, creativity, and technology-driven marketing solutions.
Core Goals

- To provide ROI-focused digital marketing campaigns.
- To help brands scale using data analytics and automation tools.
- To build strong customer retention systems through email and WhatsApp automation.
- To continuously optimize creatives using competitor research and performance metrics.
- To integrate technology with marketing for measurable and scalable growth.

1.2 Services & Products Offered

Toposel Digital Marketing Pvt. Ltd. provides a wide range of digital marketing services, including:
1. Performance Marketing

- Facebook & Instagram Ads
- Google Ads Campaign Management
- Conversion Optimization
- Funnel Strategy Planning

2. Social Media Management

- Content Strategy
- Creative Designing
- Copywriting
- Engagement Growth

3. Email Marketing & Automation

- Campaign Planning
- HTML Email Template Design
- Customer Segmentation
- Retention Campaigns
- Tools like Customer.io and automation platforms

4. WhatsApp Marketing

- WhatsApp Broadcast Campaigns
- Template-based Messaging
- Retention & Re-engagement Campaigns
- Personalized Promotional Messaging

5. Creative & Branding Solutions

- Ad Creatives
- Landing Page Copy
- Brand Messaging
- Competitor Analysis & Market Research

Chapter 2: INTRODUCTION

The internship at Toposel Digital Marketing Pvt. Ltd. provided practical exposure to industry-level digital campaign automation, structured workflow management, and data-driven customer engagement systems. I worked in the role of Retention and Graphic Design Intern, where my responsibilities extended beyond creative development to include campaign configuration, automation logic implementation, performance tracking, and troubleshooting of multi-platform communication systems. The primary objective of my role was to support and execute retention-focused digital campaigns across multiple communication channels, including WhatsApp, email marketing, and paid digital platforms. These campaigns were deployed using automation and engagement tools.

My primary responsibilities included working with a distributed communication automation system consisting of:

- Frontend creative assets (images, HTML templates, video content)
- Backend automation engines (Customer.io, Interakt)
- Messaging APIs (WhatsApp Business API via Meta) [11]
- Email delivery systems (Mailchimp, Mailjet)
- Tracking and analytics mechanisms (UTM parameters, Excel-based reporting)
- Workflow management systems (ClickUp)

The internship provided practical exposure to how structured data, automation triggers, conditional segmentation logic, and external APIs interact to deliver real-time communication to targeted user segments.

2.1 Internship Overview

The internship began with onboarding sessions focused on understanding internal workflow systems, campaign documentation standards, and structured task management using ClickUp. I was introduced to campaign tracking mechanisms using Excel-based structured sheets, where each creative asset was documented with corresponding UTM links, image URLs, template identifiers, and campaign metadata. A significant portion of my work involved understanding how digital communication systems function at a backend level - specifically how:

- Creative assets are hosted and linked (e.g., via ImgBB)
- UTM parameters are generated and appended to URLs for performance analytics [10]
- Messaging templates are registered and approved on Meta Business Suite [4]
- Automation workflows are configured using triggers and segmentation logic

This exposure provided insight into how marketing technology platforms integrate structured data, dynamic content variables, and automation rules to execute campaigns accurately.

2.2 Responsibilities and Implementation

As the internship progressed, I became actively involved in hands-on campaign execution and technical configuration. The digital campaign execution system followed a modular and layered architecture.

Architectural Layer

1. Creative Layer (Presentation Layer)

This layer focused on designing and structuring user-facing communication assets aligned with campaign objectives.

- **Email Creatives (HTML Format)**
  Designed and structured responsive email layouts using HTML, ensuring proper formatting, link embedding, preview compatibility, and platform-specific rendering.
- **WhatsApp Templates**
  Created structured messaging templates including header media, body text, variables, and CTA links for submission and approval on Meta Business Suite.
- **Social Media Visuals**
  Designed ad creatives and carousel assets in multiple aspect ratios as per platform deployment

requirements and campaign specifications.

- **Video Creatives**
  Edited short-form promotional videos, integrated text overlays, optimized dimensions, and prepared platform-compatible exports for campaign deployment.

2. Configuration Layer

This layer ensured that creative assets were technically configured and integrated with campaign systems.

- **Template Registration on Meta Business Suite**
  Registered WhatsApp communication templates, ensured compliance with platform guidelines, and monitored approval status before deployment.
- **HTML Template Editing**
  Modified structured HTML files by updating template identifiers, campaign-specific content blocks, embedded links, and formatting tags for correct rendering.
- **Media Asset Linking (ImgBB URLs)**
  Hosted visual assets externally and embedded publicly accessible URLs into templates to ensure reliable media delivery during campaign execution.
- **Metadata Configuration**
  Updated campaign-level metadata such as template names, tracking labels, subject lines, and preview texts to maintain structured documentation.
- **UTM Link Generation and Embedding**
  Generated UTM parameters (source, medium, campaign) and appended them to URLs to enable performance attribution and traffic tracking.
- **Backend API Configuration (JSON Payload)**
  a JSON payload is structured which defines the sender, recipient, template reference, and media elements.
  The payload includes dynamic customer variables, which allows the same message structure to be personalized for different users.
- **API request**
  POST https://api.in.freshchat.com/v2/outbound-messages/whatsapp. This API request triggers the WhatsApp message through the automation workflow.

3. Automation & Logic Layer

This layer involved implementing structured workflow logic and behavioural automation mechanisms.

- **User Segmentation Logic**
  Created audience segments based on behavioural attributes such as product views, engagement activity, and campaign interaction history.
- **Trigger-Based Workflows**
  Configured automated campaign flows activated by predefined events such as user inactivity, cart abandonment, or product interaction.
- **Time-Based Scheduling**
  Scheduled campaigns for specific time slots (morning/evening deployment) to optimize engagement rates and ensure controlled dispatch.
- **Conditional Campaign Branching**
  Implemented rule-based logic structures (if–else conditions) within automation platforms to send differentiated communication based on user behaviour.
- **Behaviour-Driven Retention Automation**
  Configured retention campaigns targeting users based on behavioural signals such as incomplete purchases, product-view patterns, or engagement drop-offs.

4. Delivery Layer

This layer managed actual campaign deployment and real-time communication transmission.

- **WhatsApp API (Interakt)**
  Configured, tested, and deployed WhatsApp campaigns through Interakt by linking approved templates and validating delivery logs.
- **Email Delivery Engines (Customer.io, Mailchimp, Mailjet)**
  Created and scheduled email campaigns, uploaded HTML files, configured workflows, and validated test deliveries prior to launch.
- **Campaign Deployment Systems**
  Performed final validation checks including template mapping, segmentation verification, and workflow confirmation before activating campaigns.

5. Tracking & Analytics Layer
This layer focused on monitoring, debugging, and performance analysis.

- **UTM Tracking**
  Embedded tracking parameters in campaign URLs and verified proper attribution of traffic and engagement data.
- **Sales Analytics Sheets**
  Updated structured Excel sheets with campaign performance figures, sales data, and engagement metrics for review meetings.
- **Meta Performance Metrics**
  Monitored delivery rates, click-through metrics, and approval statuses through Meta Business Suite dashboards.
- **Delivery Status Logs**
  Investigated test failures, delivery errors, and template mismatches by reviewing platform logs and performing controlled re-testing.
- **Campaign Performance Reporting**
  Compiled structured updates and performance summaries to support optimization decisions and feedback-driven revisions.

2.3 Campaign Lifecycle Understanding

Through continuous involvement, I gained a structured understanding of the complete campaign lifecycle:

1. Requirement gathering and objective definition
2. Creative design and iterative revision cycles
3. Template registration and approval workflow
4. Automation setup and user segmentation
5. Scheduling and deployment
6. Performance tracking using analytics data
7. Feedback-driven optimization

This lifecycle exposure demonstrated how technical configuration, structured documentation, automation tools, and analytics systems integrate to form a complete digital campaign execution framework

2.4 Technical Learning Outcomes

This internship strengthened my skills in:

- Workflow automation systems
- HTML-based email template configuration
- Debugging real-time campaign deployment issues
- Data tracking and analytics interpretation
- Multi-platform system integration for digital campaigns.

- Process optimization and structured task management

The experience bridged theoretical concepts such as structured data handling, system workflows, conditional logic, and debugging methodologies with real-world industry implementation.

2.5 Summary

Overall, this internship has provided comprehensive exposure to customer engagement automation systems [3] and digital campaign architecture. It enabled me to understand how technical systems, structured documentation, data analytics, and creative execution converge within a performance-driven digital marketing environment.

The experience has enhanced both my technical proficiency and my ability to operate within a structured, production-level organizational framework.

Chapter 3: TOOLS & TECH STACK USED

During the internship, I worked with a structured combination of automation platforms, template configuration systems, communication APIs, tracking mechanisms, and creative design tools. The tech stack supported end-to-end campaign lifecycle execution, including creative development, automation logic configuration, deployment, and performance analysis.

The tools used are categorized below:

3.1 Automation Platforms

1. Interakt (WhatsApp Automation Platform)

Used for configuring and deploying WhatsApp campaigns via the WhatsApp Business API. I created structured messaging templates, configured audience segments, scheduled campaigns, conducted test runs, and monitored delivery logs [2].

2. Customer.io

Used for trigger-based automation workflows across email and WhatsApp [3]. Responsibilities included configuring event-driven campaigns, creating & uploading HTML templates, defining conditional logic branches, and validating execution through test deployments.

3. Mailchimp

Used for drafting and scheduling structured email campaigns, including html template, subject line configuration, preview optimization, and campaign metadata management [6].

4. Mailjet

Used for HTML-based email campaign deployment. I uploaded structured email files, configured audience segments, and ensured rendering compatibility across email clients [7].

3.2 Template & Configuration Tools

1. Meta Business Suite

Used for registering WhatsApp messaging templates and monitoring approval workflows. I configured template headers, body text, dynamic variables, and validated compliance before campaign deployment.

2. HTML (Email Template Structuring)

Used for editing and refining email templates. I updated campaign-specific identifiers, embedded UTM tracking links, adjusted formatting tags, and ensured responsive compatibility [9].

3. ImgBB (Media Hosting Platform)

Used for hosting creative assets externally and embedding publicly accessible media URLs into templates for reliable delivery.

3.3 Tracking & Analytics Tools

1. URL Builder – tool by Google Analytics
Generated structured tracking URLs (source, medium, campaign identifiers) for performance attribution and traffic analysis.

2. Microsoft Excel (Campaign Documentation & Reporting)
Maintained structured tracking sheets containing:

- Creative asset links
- UTM tracking URLs
- Campaign schedules
- Sales and engagement data
- Segmentation details

This ensured organized documentation and analytics reporting.
Meta Analytics Dashboard
Used for monitoring campaign delivery metrics, click-through rates, engagement performance, and approval statuses.

3.4 Creative & Design Tools

While the core internship focus was automation and campaign configuration, creative tools were used to develop and refine visual assets required for campaign execution.

1. Adobe Creative Cloud
Utilized for professional-level design refinement, asset enhancement, and ensuring visual consistency across campaign materials [8].

2. Canva
Used for designing digital creatives including WhatsApp visuals, carousel ads, and multi-platform campaign creatives in required aspect ratios.

3. AI-Based Image Generation Tools
Used prompt engineering techniques to generate supporting visual assets, which were later refined and integrated into campaign creatives.

4. Video Editing Tools
Used for editing short-form promotional videos, adding text overlays, optimizing dimensions, and ensuring deployment compatibility.

3.5 Workflow & Project Management Tools

ClickUp
Used for structured task allocation, workflow tracking, revision documentation, and approval management. Enabled systematic tracking of campaign progress and deliverables.

3.6 Integrated Tech Stack Architecture

From a system-level perspective, the tech stack functioned as an integrated campaign automation ecosystem:

Creative Design Tools
↓
HTML & Template Configuration
↓
Meta Template Registration
↓
Automation Platforms (Customer.io / Interakt)
↓
Delivery APIs (WhatsApp / Email)
↓
Tracking & Analytics Systems
↓
Performance Optimization & Iterative Improvements

This integration enabled structured execution of digital campaigns with automation logic, conditional branching, and real-time tracking mechanisms.

3.7 Technical Learning

The internship strengthened my understanding of:

- Automation workflow configuration
- Event-driven campaign triggers
- HTML template structuring
- API-based communication systems
- Data tracking and attribution modelling
- Multi-platform integration
- Debugging deployment issues in production environments

The internship combined creative asset development with automation-driven deployment, strengthening my understanding of how visual design, structured templates, workflow logic, and performance analytics function together within a unified campaign execution framework.

Chapter 4: ROLES AND RESPONSIBILITIES

4.1 Objectives

The primary objective of the internship was to gain practical exposure to real-world digital campaign automation systems and understand how structured workflows, automation logic, and creative assets integrate within a production-level marketing technology environment.

The internship aimed to bridge theoretical Computer Science concepts such as structured data handling, workflow automation, debugging, and system configuration with industry-level implementation in customer engagement platforms.

The specific objectives of my internship were:

1. To understand the architecture of multi-channel campaign automation systems.
2. To gain hands-on experience in configuring and deploying automated communication workflows.
3. To develop and edit structured HTML templates for email and WhatsApp campaigns.

4. To implement user segmentation logic based on behavioural data.
5. To generate and manage UTM-based tracking mechanisms for performance attribution.
6. To understand API-driven communication systems (WhatsApp & Email delivery engines).
7. To perform testing and debugging of campaign workflows before deployment.
8. To analyse campaign performance metrics and assist in optimization strategies.
9. To enhance documentation and structured tracking practices.
10. To integrate creative execution with technical automation for end-to-end campaign delivery.

4.2 Roles and Responsibilities

In my internship, I am assigned responsibilities spanning creative execution, technical configuration, automation setup, and performance tracking. My key roles included:

1. Campaign Creative Development

- Designed email creatives, WhatsApp visuals, and social media assets aligned with campaign objectives.
- Created multi-aspect ratio creatives for platform-specific deployment.
- Edited short-form promotional videos and optimized them for campaign use.

2. HTML Template Structuring

- Edited and structured HTML email templates.
- Embedded tracking links and dynamic fields.
- Updated template identifiers and formatting for platform compatibility.

3. WhatsApp Template Registration & Configuration

- Created and registered structured WhatsApp messaging templates on Meta Business Suite.
- Configured header media, body content, and variable placeholders.
- Monitored template approval workflows.

4. Automation Workflow Configuration

- Created trigger-based workflows using Customer.io and Interakt.
- Implemented segmentation logic based on user behaviour.
- Configured time-based scheduling and conditional campaign branching.
- Conducted test runs before live deployment.

5. User Segmentation & Behavioural Targeting

- Created user segments based on product views, engagement activity, and other miscellaneous behaviour.
- Assisted in configuring behaviour-driven retention campaigns.

6. UTM Tracking & Campaign Documentation

- Generated structured UTM parameters for campaign attribution.
- Updated campaign tracking sheets with asset links and deployment details.
- Maintained documentation of campaign configurations and scheduling.

7. Campaign Deployment & Monitoring

- Scheduled and launched campaigns across automation platforms.
- Verified template mapping and workflow correctness.
- Monitored delivery logs and engagement metrics.

8. Troubleshooting & Debugging

- Identified and resolved template mismatches.
- Reconfigured workflows in case of delivery failures.
- Tested alternate configurations to resolve campaign setup issues.
- Validated Meta template approval and automation mapping.

9. Performance Review & Optimization Support

- Reviewed campaign performance metrics.
- Assisted in compiling analytics data for review meetings.
- Implemented feedback-driven revisions in creatives and messaging.

I contributed to end-to-end campaign execution by combining creative development with automation

workflow configuration, HTML template structuring, behavioral targeting, and performance tracking in a live customer engagement and automation environment.

Chapter 5: WORK DONE

5.1 Internship Work Done So Far

During the internship, I have contributed to the execution of multi-channel digital campaigns by working across creative development, automation configuration, template structuring, segmentation logic, and performance tracking.
My key work done so far includes:

- Designed email, WhatsApp, and social media creatives in required aspect ratios for campaign deployment.
- Edited and structured HTML email templates, embedded UTM tracking links, and ensured responsive formatting.
- Created and registered WhatsApp messaging templates on Meta Business Suite.
- Configured and scheduled automated campaigns using Interakt, Customer.io, Mailchimp, and Mailjet.
- Implemented user segmentation logic based on behavioral parameters such as product views and engagement activity.
- Set up trigger-based workflows and time-based campaign scheduling.
- Conducted test runs and validated template mapping before live deployment.
- Generated UTM parameters and maintained structured Excel tracking sheets.
- Monitored delivery logs, identified configuration errors, and assisted in troubleshooting failed test campaigns.
- Reviewed campaign performance metrics and implemented feedback-driven revisions.

Overall, I have actively participated in the end-to-end campaign lifecycle, integrating creative asset development with automation workflow configuration and performance analytics in a live customer engagement environment.

5.2 Week-Wise Log

Week 1 (Jan 5 – Jan 10): Onboarding & Initial Campaign Setup

- Completed onboarding and learned internal workflow management using ClickUp.
- Gained exposure to Meta Business Suite, Customer.io, Mailchimp, and Interakt.
- Understood UTM parameter generation and campaign tracking mechanisms.
- Designed initial email and social media creatives.
- Registered WhatsApp templates and launched a basic communication campaign.
- Documented campaign asset links and tracking data in structured Excel sheets.

Week 2 (Jan 12 – Jan 17): Template Configuration & Campaign Scheduling

- Designed multiple email and WhatsApp creatives aligned with campaign objectives.
- Edited HTML templates and embedded tracking links.
- Registered and configured templates on Meta Business Suite.
- Scheduled WhatsApp and email campaigns using automation platforms.
- Conducted competitor research and implemented feedback-based revisions.

Week 3 (Jan 19 – Jan 24): Automation Workflows & Optimization

- Configured trigger-based campaigns on Customer.io and Interakt.
- Implemented segmentation logic for targeted communication.
- Updated campaign planning sheets with sales and performance data.
- Edited short-form videos and generated AI-assisted visual assets.
- Launched multi-platform communication campaigns after final validation.

Week 4 (Jan 26 – Jan 31): Troubleshooting & Behavioral Targeting

- Resolved UTM tracking issues and validated campaign links.
- Investigated and debugged failed test campaign deliveries.
- Rebuilt automation workflows and verified Meta template configurations.
- Implemented behavior-driven retention campaigns (e.g., product-view targeting).
- Updated retention tracking sheets and campaign documentation.

Week 5 (Feb 2 – Feb 7): Retention Campaign Deployment

- Created and launched abandoned cart and segmented retention campaigns.
- Designed multi-aspect ratio creatives for deployment compatibility.
- Scheduled WhatsApp and email campaigns on automation platforms.
- Conducted structured revisions based on stakeholder feedback.
- Updated performance tracking sheets and campaign metadata.

Week 6 (Feb 9 – Feb 14): Advanced Workflow Configuration

- Configured and tested automated campaign templates on Customer.io.
- Uploaded structured HTML email files on Mailjet.
- Generated UTM tracking URLs for monthly campaigns.
- Conducted competitor research and structured findings in Excel.
- Scheduled segmented campaigns for same-day deployment.

Week 7 (Feb 16 – Feb 21): Performance Monitoring & Campaign Scaling

- Created audience segments for targeted email campaigns.
- Scheduled WhatsApp and email campaigns with time-based logic.
- Updated campaign tracking sheets with performance metrics.
- Analyzed competitor ad creatives and documented insights.
- Finalized themed creatives and deployed scheduled campaigns.

Week 8 (Feb 23 – Feb 28): Campaign Planning & Deployment

- Finalized campaign creatives for deployment.
- Structured the March campaign planning sheet and campaign assets.
- Tested and scheduled email campaigns on Customer.io and Mailjet.
- Configured and tested WhatsApp and email campaigns on Customer.io.
- Updated campaign tracking sheets with performance data.

Week 9 (Mar 2 – Mar 3): Campaign Execution & Workflow Setup

- Tested and scheduled WhatsApp campaigns after creative approval.
- Compiled Meta Business Suite performance metrics for reporting.
- Created messaging templates on Meta Business Suite.
- Configured automation workflows on Customer.io for scheduled campaigns.

Chapter 6: FUTURE PLAN

Based on the experience gained so far, my future plan is to deepen my understanding of automation-driven customer engagement systems while expanding my exposure to performance marketing operations. During the remaining internship period, I will continue working on retention campaign automation and also collaborate with the performance marketing team to learn the tools and strategies used for managing and optimizing paid digital campaigns.
In the upcoming phase of the internship, I aim to:
• Work on advanced automation workflows involving **multi-step conditional logic and event-driven triggers**.
• Gain deeper exposure to **API-based integrations and backend campaign configuration**.
• Improve efficiency in **HTML email template structuring and dynamic content handling**.
• Strengthen analytical skills by interpreting **campaign performance metrics and optimization data**.
• Contribute more independently to **end-to-end campaign deployment and testing**.
• Explore optimization techniques such as **A/B testing and performance-based segmentation**.

Through this experience, I aim to strengthen my understanding of workflow architecture, behavioural targeting, campaign analytics, and automation systems, helping bridge my academic Computer Science knowledge with practical applications in marketing technology systems.

Chapter 7: CONCLUSION

The internship at Toposel Digital Marketing Pvt. Ltd. has provided comprehensive exposure to real-world campaign automation systems and structured workflow management.

Through hands-on involvement in creative development, HTML template configuration, automation logic setup, segmentation implementation, campaign deployment, and performance tracking, I gained practical experience in integrating creative execution with technical systems.

The internship strengthened my understanding of:

- Workflow automation mechanisms
- Conditional logic-based campaign execution
- Structured template configuration
- Data tracking and attribution models
- Debugging and validation in live deployment environments

Overall, this experience has enhanced both my technical proficiency and professional skills. It has helped me understand how system architecture, automation tools, and data analytics work together in a real-time business environment.

The knowledge and skills gained during this internship will significantly contribute to my future academic and professional growth in technology-driven domains.
